Alan Gloria

Senior iOS Engineer

Saltillo, Mexico (Remote) | alangloriasilva@hotmail.com | alangloria.com | linkedin.com/in/alan-gloria | github.com/alandavid11

PROFESSIONAL SUMMARY

Senior iOS Engineer with 4+ years shipping native Swift apps (SwiftUI, UIKit, Swift Concurrency), specializing in mobile test infrastructure, CI/CD and release reliability for regulated and high-traffic products. Raised the native iOS CI of a clinical-grade medical-device iOS SDK from a 30% to a 99% daily pass rate across 550+ tests, and helped take a 3.1M-user US retail iOS app to 99.97% crash-free sessions. Founder of WalletMe + POSMe, a point-of-sale and Wallet loyalty platform running in real businesses, with six iOS apps live on the App Store.

CORE COMPETENCIES

Languages: Swift, Objective-C, TypeScript, JavaScript, SQL, C#

iOS: SwiftUI, UIKit, Swift Concurrency (async/await, actors), Combine, SwiftData, WidgetKit, watchOS, PassKit, StoreKit, CloudKit, App Attest, Metal, Vision, AVFoundation, APNs

Testing and CI/CD: XCTest, XCUITest, Swift Testing, Appium, GitHub Actions, Fastlane, TestRail, TestFlight, App Store release management

Web and Backend: React, Next.js, Supabase (PostgreSQL, RLS, Edge Functions), SQLite, Tauri (Rust), Cloudflare Workers, Stripe, REST APIs

AI: Claude API (structured outputs, Batch API, prompt caching), Claude Code, GitHub Copilot, Gemini CLI

Practices: Verification and Validation (V&V), offline-first architecture, Clean Architecture, MVVM, Agile/Scrum

PROFESSIONAL EXPERIENCE

ITJuana | Remote | Client: healthcare company (FDA-cleared medical device)
iOS Engineer | Jul 2024 - Present

- Raised the native iOS CI daily pass rate from **30% to 99% across 550+ automated tests** by introducing variable parallelization across the available build machines, cutting execution time by at least 50%.
- Diagnosed and fixed a day-zero defect where Appium could not read SpringBoard during transmitter pairing. It had been the **#1 cause of iOS transmitter test failures for about two years** (8 to 10 minutes lost per failed run); failures from it dropped to zero.
- Wrote a device-health repair script that resolved **two release-wide CI outages** the device lab, tools and native teams could not fix: devices stuck in "preparing device" stalling the full iOS Appium run, and an app-uninstall failure breaking every native UI test.
- Architected the GitHub Actions and Fastlane CI/CD pipeline, cutting build times by **~40%** and enabling **weekly releases with zero rollbacks over nine months**; removed architectural bottlenecks hit by 347 regression tests, reducing the critical-path run from 5h46m to ~4h23m (~24%).
- Led GitHub Copilot and Gemini CLI adoption, freeing the capacity to run **two SDK release tracks in parallel** for the first time without adding headcount; built a tool to run and publish native iOS test results on demand, previously possible only through CI.

WalletMe + POSMe | Saltillo, Mexico | walletme.mx | Concurrent with ITJuana
Founder and Software Engineer | Sep 2026 - Present

- Founded, built and operate solo a **point-of-sale and loyalty platform running in real businesses** in Mexico: an offline-first register on Windows, Android tablets and iPad, a SwiftUI owner app for iPhone, Apple Wallet and Google Wallet passes, and a Next.js dashboard.
- Designed one TypeScript register core on **Tauri 2 (React + Rust)** plus a native UIKit shell for iPadOS 12; registers keep selling offline on SQLite and sync through per-device cursors to Supabase Postgres, with money movements corrected with history and never deleted.
- Shipped **two Claude-powered features to production** (menu import from a photo or PDF through a strict JSON schema, and a monthly business analysis through the Batch API with prompt caching) where application code

computes every number and the model only explains it.
- Built clone-resistant NFC loyalty: NTAG 424 DNA tags sign every tap (SUN + CMAC, verified server-side), with passes updated live through PassKit and the Google Wallet API.
- Delivered CFDI 4.0 e-invoicing under Mexico's 2026 SAT rules with QR self-invoicing, and signed auto-updates that install only between sales, gated on **91 test suites**.

IBM | Remote | Client: top US home-improvement retailer
iOS Engineer | May 2023 - May 2024
- Owned the Embrace SDK integration for crash reporting; the visibility it added underpinned a stability push that raised crash-free sessions from **99.71% to 99.97% on an app with 3.1M active users**.
- Rebuilt the analytics layer, improving funnel accuracy by **20%**, and shipped Airship push flows that contributed to a **15% lift in 30-day retention**.
- Owned features end to end across hybrid SwiftUI and UIKit surfaces and resolved critical deep-link failures; my write-up became the team reference for URL schemes and Universal Links.
- Introduced GitHub Copilot to the iOS squad as its first adopter.

Freelance | Saltillo, Mexico | Concurrent with BorgWarner
iOS Developer | Jan 2022 - May 2023
- Built a native iOS restaurant-discovery app solo from zero to App Store release using Swift and SwiftUI (MVVM, later Clean Architecture with SPM modules), Firebase Auth and Firestore, and Core Location maps and routing.

BorgWarner | Saltillo, Mexico | Automotive manufacturing
Software Engineer, Manufacturing Systems | Feb 2021 - May 2023
- Built scrap-recovery tooling that saved **$172K USD annually** by eliminating permanent write-offs.
- Automated reconciliation workflows that cut scan cycle time from **20s to 8s** and quality rework from 4h to 1.5h.
- Developed shop-floor software in Swift and C# across 3 production lines, plus SQL systems, Power BI dashboards and a digital suggestion platform used by **1,800+ employees**; mentored 3 trainees through their first production apps.

INDEPENDENT IOS APPS (APP STORE)

- **Raro** (v1.1): collect real places as trading cards. Swift 6, SwiftUI, Metal, Vision, Supabase; server-side rarity and anti-cheat anchored in App Attest.
- **WoRD** (4.4 stars): speed-reading trainer. SwiftUI, WidgetKit, Game Center, RevenueCat subscriptions and AdMob.
- **Triplook**: AI travel outfit planner. SwiftUI, CloudKit, Cloudflare Workers, Claude and fal.ai.
- **RemainingWeeks**: life calendar for iPhone, iPad and Apple Watch. SwiftData, WidgetKit, watchOS, iCloud sync.

EDUCATION

Monterrey Institute of Technology (ITESM) | B.S. Industrial and Systems Engineering | 2016 - 2021

Platzi | Software Development Program | 2021 - 2023

LANGUAGES

Spanish (native), English (professional working proficiency)
